ABSTRACT: Recently collected samples from lakes Beyşehir and Eğirdir in Turkey contained one new Pleistocene *Valvata* which we describe here as †*Valvata beysehirensis* n. sp. In addition we found two new species of *Gyraulus*, named *G. egirdirensis* n. sp. and *G. taseviensis* n. sp. These species are compared with members of the genera *Valvata* and *Gyraulus* known so far from Turkey.

KEY WORDS: *Valvata*, *Gyraulus*, Turkey, Lake Eğirdir, Lake Beyşehir, new species
