

**NEOLITHIC MALACOFAUNA IN THE KYME EXCAVATIONS (ALIAĞA),
ON THE AEGEAN COAST OF ANATOLIA**

by Alberto Girod *)

Abstract: The excavations conducted at Kyme (Turkey, West Anatolia) have confirmed the presence of the Neolithic in this area. The Neolithic levels are closed at the top by a level of grey clays containing fresh-water molluscs and a land species. Some palaeo-environmental indications are possible.

Key words: Kyme, West Anatolia, fresh-water molluscs, Neolithic, palaeo-environment.
